

Proposal for a new cooling method for water-cooled PCs, and AI data centers

Overview: The biggest drawback of immersion cooling. Capillary water cooling is more suitable.
New cooling method for water-cooled PCs, and AI data centers Materials

Capillary + Master Bag + Copper tube wound heat sink
Magnet that absorbs back electromotive force (MABEF).
Magnetic Energy Absorption Chip (MEAC)

Duolingo (4 English skills) score 130
Around November last year, I achieved a score of 130 (the highest score).
Still, in Japan, there are no opportunities to converse in English. It is closed off.

【My self-introduction】

I am a music and audio specialist.

My papers on acoustics and more are registered.
